

THE NAIL HAS ARRIVED.

NEST ABANDONMENT INDUCTION LASER

Preventing Ignitions and Wildfire Risk. Reducing Operational Costs.

A field-driven solution, not a theoretical one.

We developed the NAIL system to specifically address the growing threat posed by avian-caused outages and fires to utilities worldwide.

Our autonomous, non-lethal system is grounded in a deep understanding of bird behavior and was designed in close partnership with the hard-working people of the utility industry.

The NAIL is easy to install with a single hot stick and is designed to be durable, low-maintenance, and meet industry equipment standards. The patented bracket-and-module design can be customized to meet any customer's specific needs while remaining cost-effective.

Our solution detects animal presence before a nest can be constructed and trains the bird to avoid the asset entirely. This desired outcome is achieved with precise aversive training, innovative engineering, animal science, and the deep insight OrniLogic brings as a cross-disciplinary organization.

Early partners and collaborators:

PROTECT YOUR ASSETS BEFORE THE BIRDS MOVE IN.
